Stop norovirus spreading this winter

Norovirus, sometimes known as the 'winter vomiting bug', is the **most common stomach bug** in the UK, affecting people of all ages. It is **highly contagious** and is transmitted by contact with contaminated surfaces, an infected person, or consumption of contaminated food or water.

The symptoms of norovirus are very distinctive – people often report a sudden onset of **nausea** followed by **projectile vomiting** and **watery diarrhoea**.

Good hand hygiene is important to stop the spread of the virus.

People are advised to:

- Wash their hands thoroughly using soap and water and drying them after using the toilet, before preparing food and eating
- Not rely on alcohol gels as these do not kill the virus

An infection with norovirus is self-limiting and most people will make a full recovery in 1-2 days. It is important to keep hydrated – especially children and the elderly.

Do not visit either A&E or GPs with symptoms as this may spread the virus.

Further information and advice is available from NHS 111, including an online symptom checker at [nhs.uk](https://www.nhs.uk).
